

# Vocabulary Start-Up

The distribution of a set of data shows the arrangement of data values. The words below show some of the ways the distribution of data can be described. Match the words below to their definitions.

## Vocabulary

**Cluster** - Data that are grouped closely together.

**Gap** - An empty space or interval in a set of data.

**Symmetry** - the left side of the distribution looks like the right side.

**Skewed** - one side of the data has more than the other side.

**Peak** - The most frequently occurring value on a line plot.

## Key Concepts

- When the data is symmetric, you need to find the mean.
- When the data is not symmetric, you need to find the median or interquartile range.

Describe each graph using the vocabulary terms: symmetry, cluster, gap, skewed, and peak.

Temperature (°F)

Description:

Symmetry: *no symmetry*

Cluster: *16-18 22-25*

Gap: *19-21*

Skewed: *right*

Peak: *22*

Ages of Tennis Players (yr)

Description:

Symmetry: *yes*

Cluster: *25-33*

Gap: *none*

Skewed: *no*

Peak: *28, 29, 30*

Weights of Dogs (lb)

Description:

Symmetry: *no symmetry*

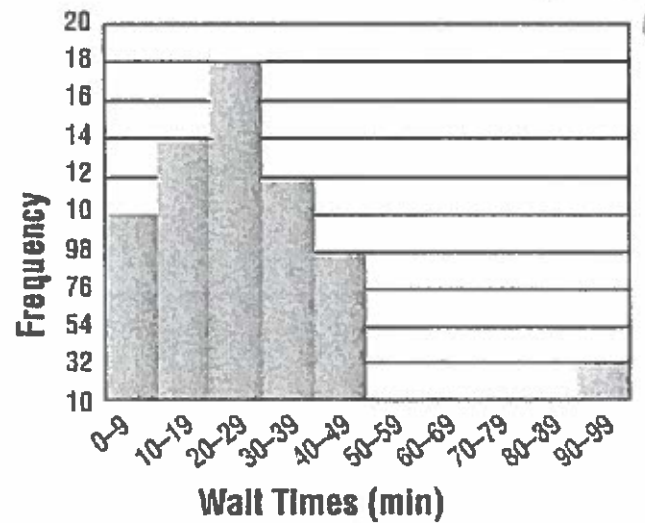

~~Cluster:~~

~~Gap:~~

Skewed: *right*

~~Peak:~~

Concert Entrance Wait Times (min)

Description:

Symmetry: *no symmetry*

Cluster: *0-49*

Gap: *50-89*

Skewed: *left*

Peak: *20-29*
